Abstract

The high quality developing financial development will be established explicitly according to studying national policies with Chinese central political bureau by president in 2024. The digital economy and artificial intelligence product will be prevalent particularly and currently in every corner of our society. At the same time, the stock market is to be replaced by AI diagnosis software where the tendency of stock price fluctuated with time can be reminded. The popularity stock can be dominant with the help of that kind of stock software. Sustainability financial institution will be advocated and supported with high quality developing reformation urgently and prioritizing to. Digital economy as an important entity has been wielding strong effective power impacting currently to conventional ones. Specially emphasizing on it will be granted as a new tendency currently where it utilizes its powerful influence into bill of traditionally paying and receiving behaviours in common transaction and shopping mall communities at the current prevalent situation of sustainability economy.

Keywords: High quality; Developing; Innovation; Financial institution; Current; Sustainability

Introduction

There is a new financial meeting to happen for 2024 where high quality financial institution is proposed by China central political bureau and president in China. So the finance problem has to be provided to a new innovative project where it is the most important issue from last year. Therein the policy made by us is able to become a big theme at which it conducts the loan to express a reasonable and justice criterion for us to make in the end [1-2]. The financial reformation will be called as the blood of body whose effectiveness is going to make a vitalization of body due to its actively supportable vitalized role, therein the work may be very prompt and emergent for our policy maker to complete in predicted advance. With the central bureau spirit the detail work has to pursue in order to satisfy main kinds of different demands primarily that is saying that clarifies the main and small, big and little status firstly. So it enables the institution to make the policy easy to come out and determine its factor and effect on behalf of the common

demand firstly and then improve it gradually within a time. The classified work has to be based on the different business and profitability whilst it ensures the virtual and actual data corrective ratio. Furthermore the whole course would be monitored and controlled by inspection institution on behalf of the enterprise beneficial with sustainability economy. The financial innovative behaviour will be advocated forcefully and the governmental policy can be made quickly whose innovation and reformation is to regulated by them. On the other hand, the enterprise is going to main entity for burdening the loan so it will be put emphasized position to provide loan, we should judge its achievement and potential to dig the detail loan on them after considering it thoroughly. The loan shall be invested to suitable position on behalf of that factory beneficial on the world.

Discussions

Spirit of enterprise and finances

The spirit of enterprise must reflect surrounding people besides staffs in business and then it will be proposed commitment for acquire loan capital to improve or reform new items for establishing their new innovative infrastructure. On behalf of most factory benefit the enterprise needs to propose blue plan continuously for the sake of growing their scale and more benefit. The institution could be loaning capital to the former for finishing an item and judge which is belonging to the advantage scope or not and then the loan behavior can be executed completely. The loan size will correspond to the degree of advantage and think whether loan can create efficient benefit and whether the long view of enterprise and environment factor can be compliant or not. When the compliance could be corresponding to the developing efficiency including the atmosphere improvement and policy impetus etc.. Spirit of enterprises must be based on benefit size, common benefit and environmental matter which can be expressed in the items proposed to credit and loan contract with bank who is able to regulate somewhat necessary part and credit, thereby in light of the policy the loan will be distributed where the advantageous aspects can be reflecting. So the bank and enterprise will create new firming relationship while the former affords loan and latter establish the entity of factory. They are creditable relationship with common credit and loan relation under a beneficial one aim to push environment forwards to clean one. If enterprise deficits the bank will benefit low, on the contrary if enterprise benefit the bank is going to benefit as well. There are some advantage conditions which include advocating business granted to some innovative enterprises with prioritizing to them. Therefore an enterprise needs to have technologically innovative who can be entry the advocating company list for receiving prioritized right. The prioritizing right may include several millions to several ten millions money sponsor which can be utilizing high technology enterprises. So the developing aim would concentrate highly cutting edge field ones which can transform their products to huge benefit and promote clean environment problems highly advocated by government and department. We is able to cultivate talents from the whole society and school for enhancing our capacity to develop and search new innovative products on behalf of general having demand people. That financial investment should be supported by bank relied on creditable and advantage can the item proceed continuously where the new product may be created going on. Only if the advocating items will be executed with advantage by government department it can acquire capital necessary for purchasing equipment and product line besides worker salary. Thereby we advocate to own advanced technical capacity to ensure that the project can proceed exceptionally. Those ones will be regarded to joints of sustainability economy for emphasizing research and cultivation. In view of environment protection they is willing to step more advance and progression since it is about to clean atmosphere which can be developed with

advantageous rights by policies. Furthermore it can promote technological sophisticated level like intelligence product which will be convenient and prompt & comfortable to our life. So they can really improve our live ultimately and let us embody new style live recently. We need them to improve the transaction really from now on.

Stock principles for exchange programme

Stock diagnostic model is a tool used to evaluate and predict the trend of the stock market. By using multiple data sources and technical analysis methods, it can help investors better understand the status of the stock market and make more intelligent investment decisions [2]. The stock exchange behavior includes three aspects which are choosing suitable one, buying certain shares with certain price, waiting for several days and selling one with higher one.

The design of diagnostic model

Stock diagnostic models typically include the following key elements:

1. Data collection: Collect fundamental data about the stock market, such as company financial reports, industry trends, macroeconomic indicators, etc.
2. Trend analysis: Analyze the rise and fall of stock prices and identify trends and cyclical changes in the market.
3. Indicator evaluation: Use a series of technical indicators, such as moving average, relative strength index, volatility, etc., to evaluate the trend and volatility of stock prices.
4. Risk assessment: Assess the risk level of the portfolio, including market risk, industry risk, individual stock risk, etc.
5. Prediction model: Based on the above analysis, a prediction model is established to predict the future trend of the stock market.

The application of diagnostic model

1. Stock selection: Through the diagnostic model, investors can determine which stocks may have good investment potential.
2. Trading strategy: According to the recommendations of the diagnostic model, develop corresponding trading strategies, including when to buy, when to sell, how many positions to hold, etc.
3. Risk control: The diagnostic model can help investors develop more reasonable risk control measures to ensure that the risk of the investment portfolio is within the tolerable range.
4. Portfolio optimization: Diagnostic models can be used to optimize portfolios to improve overall returns and reduce risk.

Precautions

1. Data accuracy: The data source of the diagnostic model may be affected by various factors, such as data quality and data update frequency, so it is necessary to ensure the accuracy and reliability of the data source.
2. Limitations of technical analysis: Although technical analysis has a certain role in the stock market, it must be combined with

fundamental analysis to make a comprehensive judgment to avoid misleading.

3. Investor psychology: Investors' emotions and psychological factors may affect the accuracy of the diagnostic model, so investors need to keep rational and calm and make decisions according to the actual situation.

To sum up, the stock diagnostic model is a tool with high practical value, which can help investors better understand the stock market and make more intelligent investment decisions. However, when using this model, factors such as data accuracy, limitations of technical analysis and investor psychology should be fully considered to ensure the rationality and effectiveness of investment

decisions. The loan which is distributed by national bank shall be invested to suitable position on behalf of that factory and customer beneficial on the world in light of proper policy. Financial innovation has a significant role in economic development whose frontier is stock market so we must considerate the instructional behavior through our financial government. Government may proceed policy aspect instruction through regulating the economic distribution in order to improve the investment environment on advantageous enterprise. At the same time we should pay attention to stock market which can change every hour to reflect special matters happening.

Conclusions

Only when the policy is able to satisfy the most profitability can the constitution proceed smoothly and conveniently. In short the made policy has to follow the trend of all of people benefit whose aim is to be completed in light of reflecting the common benefit of our people, so only when we must guarantee every important joint to be pursue easily for maintaining main spirit the aspects can be finished in time even in advance. [Yangdian Tech] increases 11% with buying price 21 yuan and maximum one attaining 26 yuan by T+1 and increase amplitude 20%, meantime customer earns 2,492 yuan when it was 15%. [Sichuang Electron] increases 57% with buying one 15 yuan and maximum selling one 24 yuan in April, 2024. [Yizhimi] increases 6% with internal buying price 23.85% and pool maximum 25.29 yuan. The strong stocks with the price of 10 yuan titled 60 will be recommended for short terms in main plate. The economic sustainability must be advocated and be given advantage benefit in order to maintain our atmosphere commonly where many policies and endeavors should be paid, so our live will change better and better on the whole with continuous innovation.
